SEMI CUSTOM CARBON TENDERS

280

When light weight meets luxury!

Meet the ASTender range, built in carbon fibre, because performance matters and the future is lightweight. ASTenders are high-performance boats, built on the highest standards in composite production: They are robust, durable and highly efficient.

The rigid carbon construction is lighter than any RIB on the market. The construction will neither deflate or age in the sun. Its gelcoat is as easy to care of as on any GRP boat. The high-quality commodities used ensure longevity with a minimum of maintenance.

The stiff hull with its optimized shape needs 35% less power than a RIB and though creates less emissions. Also it can be perfectly propelled with an electric drive.

The extra buoyancy, of the foam sandwich and the waterproof compartments, makes the ASTenders unsinkable. The absence of inflated tubes makes the ASTenders the most spacious tenders you will have used.

The wide hull shape provides enormous stability and allows easy boarding. The high freeboard with the deep V-keel offers dry and comfortable rides, making it the perfect companion for all your endeavours.
